INTRODUCTION

THE 2000 MOST COMMON WORDS IN CHINESE

Conclusion

INTRODUCTION

How many languages are there in the world? There are about 1,500. Chinese (or Mandarin) is one of them, and it is a fascinating, unique, and extremely rich language. Counting roughly 1.3 billion native speakers, it is used by the largest number of people in the world. Not only this, but China's rapid rise as a global superpower is making it an increasingly significant means of communication for people in Asia and beyond. These two reasons should be enough to convince you to learn Chinese, but if not, here are some more!

The study of the Chinese language opens the way to different important fields such as Chinese politics, economy, history or archaeology. To study the Chinese language finally means to study Chinese culture and the Chinese people. At the heart of Chinese civilization is its rich heritage of novels, short stories, poetry, drama, and, more recently, movies. They contain words, phrases, and expressions that reflect the culturally significant traditions, the values, the ideas, the struggles, the sensibility, the joys and the sorrows that just cannot be expressed correctly through a translation.

Almost everyone in the world has heard about China's achievements in every aspect and the country's newfound significance in the world economy. Companies aiming at China's market require professionals with an understanding of Chinese culture, language skills, or related knowledge to help them expand their business in China. Learning Chinese will provide you with an excellent opportunity to get ahead of your colleagues and attract the attention of headhunters.

China boasts one of the world's oldest civilizations, rich cultures and interesting history of over 5,000 years. Learning Chinese will provide you the opportunity to discover the endlessly fascinating lives of over 1.3 billion people. By learning Chinese, you can take one of the most culturally enriching adventures - exploring the populous cities and traditional villages, enjoying delicious foods, and absorb new traditions throughout the country without barriers!

If you've picked this book up, you've already made good progress in learning the language. This book can give you an incredible tool in learning the Chinese language: *vocabulary*. Now you've just got to learn how to use it.

What this book is about and how to use it:

There are hacks to learning every language, but learning the vocabulary is a surefire way of speeding up your learning of a new tongue. Just look at these three amazing stats found in a study done in 1964:

1. *Learning the first thousand (1000) most frequently used words of a language will allow you to understand 76.0% of all non-fiction writing, 79.6% of all fiction writing and an astounding 87.8% of all oral speech.*
2. *Learning the top two thousand (2000) most frequently used words will get you to 84% for non-fiction, 86.1% for fiction, and 92.7% for oral speech.*
3. *Learning the top three thousand (3000) most frequently used words will get you to 88.2% for non-fiction, 89.6% for fiction, and 94.0% for oral speech.*

Just look at those stats and imagine what you could do with this book once you've thoroughly read and practiced what it contains? We're providing you with two thousand of the most frequently used words — equivalent to an understanding of 92.7% of oral speech!

We achieve this not only by giving you a long list of words; there must be context to allow the words to sink in, and we provide that. Each of the terms will be listed with its Chinese Pinyin, translation in English and example sentence with translation, allowing you to study the use of each word in a common, accessible manner. We have ordered the terms in their largest number of occurrences in common media, allowing you to begin with the simplest and most regularly used words first before moving on to the less-used ones.

So now, do you need anything else while reading this book? Yes, you may, as always. There are hundreds of thousands of more words out there, but these will certainly give you a head-start on learning the language and getting closer to mastering it.

Recommendations for readers of *2000 Most Common Words in Chinese*:

Although we'd love to begin right away with helping you learn the vocabulary we've provided in this book, we've got a few tips and recommendations for getting the most out of this book:

- 1- Repetition: The more times you see, hear, say, write a word, the more likely you are to remember it.
- 2- Concentration: Staying alert when you memorize is vitally important.
- 3- Application: A word that you find a chance to use in a conversation is more likely to stay with you than a word that you only studied in a book.
- 4- Movement: Physical movement combined with memorization helps you remember words better. Sway your arms, rock your head, pace the room, do whatever you need to.
- 5- Associations: Associate a word with something that is memorable, funny, shocking, etc. It may help to associate the Chinese word with

some word in your own language that the Chinese word sounds like – the more absurd, the better.

IMPORTANT NOTE:

Chinese has relatively uncomplicated grammar. Unlike Indo-European languages, Chinese has no verb conjugation and no noun declension. For example, while someone learning English has to learn different verb forms like “eat/ ate/ eaten,” all you need to do in Chinese is remember one word: 吃(Chi). While in English you have to distinguish between “dog” and “dogs,” in Chinese there is only one form: 狗(Gou).

Chinese uses one of four tones for nearly every word in the language. Thus, a syllable pronounced with a high-level intonation is a different word from the same syllable pronounced with a rising intonation, a falling-rising intonation, or a falling intonation. The classic example used to intimidate beginner learners in Chinese is the syllable “ma”, which means “mother” when pronounced with a high-level intonation and “horse” when pronounced with a falling-rising intonation. Another classic example is the syllable “en”, which expresses hesitation when pronounced with a flat intonation, doubt when pronounced with a rising intonation, rejection when pronounced with a falling-rising intonation and confirmation with a falling intonation.

Learners sometimes feel that they cannot hear tones, but this is not exactly what the problem is. After all, English speakers listen to and use intonation all the time. Consider the difference between a rising tone “Yes?” (as someone answers the door) or a falling tone “Yes!” (as an enthusiastic response to an invitation). The difference between Chinese and English is that in English intonation functions at the sentence level instead of the word level, with the rises and falls of tones, the sentences convey the emotional impact of the message. The problem for learners is not hearing intonation per se but hearing intonation as part of the pronunciation of a word!

Be wary - the tones mentioned in this book are based on Mandarin, while the writing is based on simplified Chinese characters. However, you may also hear people talking about Cantonese and traditional Chinese characters. Technically, Cantonese is a subset of the Yue language family found in southern China. Both Mandarin and Cantonese refer to spoken languages that are members of the Sinitic linguistic family. They are both tonal languages, though the tones are different and they are not mutually intelligible. As such, they cannot really be referred to as dialects because a Cantonese speaker cannot understand a Mandarin speaker and vice versa. Regarding the writing, both Mandarin and Cantonese shared the same character sets until the 1950s and 1960s when simplified Chinese characters were officially adopted in mainland China in order to increase literacy rates. The traditional characters were retained by Cantonese speakers in Hong Kong and Mandarin speakers in

Taiwan, and the writing systems are therefore largely independent of the spoken languages.

More and more students around the world begin to study Chinese each year with enthusiasm and success.

If they can learn it, so can you!

THE 2000 MOST COMMON WORDS IN CHINESE

Hello again, reader. As I previously stated in the **Introduction**, the words have been arranged by their frequency of use in common media, such as films, series and books. Feel free to rearrange them during your practice to make things interesting.

You will be provided with a **word, Chinese Pinyin, a translation of said word** and **one example with the translation** of the term given. It's as easy as that.

Let's begin:

1- 的 /de/ – *Adjectival suffix; possessive particle*

这件黑外套是我的。

This black coat is **mine**.

2- 一 /yī/ – *One; a, an*

桌面上有一个杯子。

Conclusion

And thus, we've finally reached the very end of this wonderful list of the **2000 Most Common Words in Chinese!** Be glad - your vocabulary has been greatly increased. Just remember: don't be too harsh on yourself! Learning a language is a gradual process - you have to keep at it. To be honest, Chinese is one of the hardest languages to learn, so take your time. Once you feel comfortable with the basics of Chinese speech, consider taking a trip to China.

We are happy to have helped you with your practice of Chinese and hope to see you again soon; we'll surely meet again in future books and learning materials.

So, take care and study hard, and don't forget the tips we gave you at the beginning if you want to become a Chinese pro!

- 1- Repetition
- 2- Concentration
- 3- Application
- 4- Movement
- 5- Associations

With that said, we've covered every single thing. Now go out and learn some more Chinese — you're already more than halfway there!

PS: Keep an eye out for more books like this one; we're not done teaching you Chinese! Head over to www.LingoMastery.com and read our free articles, sign up for our newsletter and check out our **Youtube channel**. We give away so much free stuff that will accelerate your Chinese learning and you don't want to miss that!

If you liked the book, we would really appreciate a little review wherever you bought it.

THANKS FOR READING!
